Manual Testing: Ali Mohamed Abdelsalam

1. Project Overview

Mola Mola Diving Center is a diving and snorkeling website for activities in Muscat, Oman. The documented test scope covers trip and course information, booking, packages, contact details, FAQs, gallery, navigation, and content presentation. Manual testing checked whether these flows and their displayed information behaved as expected.

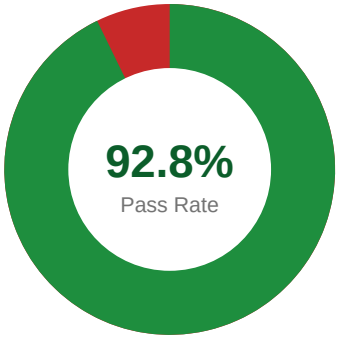
2. Testing Overview

Ali Mohamed Abdelsalam executed 166 documented manual test cases. Coverage included:

- **Navigation:** navigation and linked pages.
- **Content cards:** trip, course and package cards; gallery and content visibility.
- **Booking:** booking fields and pricing summary.
- **Forms and input validation:** contact information, forms and input validation.
- **Display:** responsive presentation.

3. Test Case Summary

Metric	Result
Total Test Cases	**166**
Executed	**166 (100%)**
Passed	**154**
Failed	**12**
Pass Rate	**92.77%**
Fail Rate	**7.23%**
Bug Report Entries	**12***



154 of 166 test cases passed

* Some bug report entries may share a root cause. Results are taken from the revised test-case workbook; blank separator rows are excluded from the count. The separate bug-tracking workbook documents the twelve failed cases.

4. Key Testing Results

Area	Cases	What was validated / observed	Result
Navigation and trip content	4	Several linked trip pages have content obscured by images (TC_021, TC_023, TC_103, TC_133).	ISSUES
Contact information	2	Footer and Contact page map/address destinations were reported as incorrect (TC_037, TC_079).	ISSUES
Booking form	2	People field accepts invalid inputs and handles large values inconsistently (TC_051, TC_052).	ISSUES
Private trip pricing	1	Displayed private-trip total stays at 350 when the people count changes (TC_054); confirm intended pricing model.	REVIEW
Course and package booking	2	Booking links do not preserve the selected course or plan (TC_102, TC_105).	ISSUES
Dive Trips page	1	A 404 was reported for /dive-tips/ (TC_108); verify intended URL and link path before confirming defect.	REVIEW
Other executed scenarios	154	All remaining cases were recorded as passed in the revised workbook.	PASS

Across 166 test cases, 154 behaved according to their expected results and 12 failed. The failures concentrate on content visibility, contact and map information, booking validation, and booking selection. Two items (private-trip pricing and the Dive Trips URL) are marked for review before they are confirmed as defects.

5. Conclusion

Manual execution recorded 154 passed and 12 failed cases, a 92.77% pass rate. The bug-tracking workbook describes the observed failures, particularly content visibility, contact/map information, booking validation, and booking selection. Before final defect closure, confirm the intended private-trip pricing rule and the Dive Trips URL; repeated content-obscuring failures may share a common underlying issue.

154 Passed | 12 Failed

166 Executed | 92.77% Pass Rate
